Dear Greg,

RE: Reducing GHG Emissions

Further to the question you put to me on Monday regarding the ability of ALOA's members to reduce landfill gas (methane) emissions, I confirm that the position we have on public record (i.e. that if a rebate of \$10 per tonne of CO₂e abatement was available members could reduce landfill emissions by 50% over the next ten years) is still valid.

Yours sincerely

Max Spedding
Secretariat
Australian Landfill Owners Association

Approximate Numbers:

Current generation	15 million tonnes CO ₂ e
Current collection	4 million tonnes CO ₂ e
Current emissions	11 million tonnes CO ₂ e
Potential additional abatement	5-6 million tonnes CO ₂ e
